Prostate Cancer Awareness Month

September is Prostate Cancer Awareness Month.

One in six American men will get prostate cancer in his lifetime. Fortunately, Batte Cancer Center is here to help you prevent, diagnose and treat prostate cancer.

Get screened.

The early stages of prostate cancer produce no symptoms so regular check-ups and screenings give you the best chance of finding the disease before it advances. Talk to your doctor about your screening options.

Be in touch with your health.

Be on the lookout for the following symptoms and visit your doctor if you notice any:

- Changes in your urinary habits, such as frequency, urine stream and emptying
- Pain or burning during urination or blood in your urine
- Deep pain in your lower back, belly, hips or pelvis

Several treatment options may be available to you.

Batte Cancer Center provides the most advanced treatment options to patients. In addition to traditional approaches, we are pleased to offer prostate cancer treatment using the da Vinci[®] Surgical Robot or CyberKnife[®] Robotic Radiosurgery System. If you are diagnosed with prostate cancer, talk to your doctor to decide which treatment plan is best for you.
