Insurance Coverage for Labs and Screenings

All recommended labs and screenings may not be covered.

To help you avoid any unexpected or unwanted charges from your insurance company, we recommend that you verify coverage with your insurance carrier prior to your appointment.

Please see below a list of commonly ordered labs and screening recommendations for adult physicals. Your physician will customize according to your needs, which may include any or all of the screenings and labs listed. All labs and testing are ultimately optional.

When calling your insurance company to verify coverage, they will require the name of the lab/screening and the CPT code listed below to determine coverage for specific labs or tests.

Table with 3 columns: Lab, Description, CPT Code. Rows include CBC, BMP, LFT, CMP, GHP, Lipid Panel (Cholesterol, Triglycerides, LDL, HDL), TSH, Vitamin D, Vitamin B12, and Urinalysis.

Table with 2 columns: Immunizations, CPT Codes. Rows include Flu Shot, Pneumonia Vaccine, Shingles Vaccine, and Tetanus.

Table with 2 columns: As needed/requested, CPT Codes. Rows include EKG, Chest X-ray, Pulmonary Function Test, and Dexa Scan (Women).
