Levine Children's Hospital
Pediatric Rehabilitation Pavilion

Our Facility

LevineChildrensHospital.org/rehab

Our 13-bed, dedicated pediatric rehabilitation unit is located on the 4th floor of Levine Children's Hospital (www.LevineChildrensHospital.org). All our rooms are private with in-room sleeping accommodations for a parent or caregiver. Our Family-centered Care philosophy allows us to effectively treat the whole child and tend to the emotional and physical needs of our patients and their families.

Our Team

The team consists of dedicated therapists, nurses and physicians, as well as social workers, teachers, rehab liaisons and other skilled professionals. We also have direct access to the full spectrum of medical specialists found in our nationally recognized children's hospital.

Many of our team members are either Certified Brain Injury Specialists (CBIS) or Certified Rehab Registered Nurses (CRRN). The Pediatric Rehabilitation Program is CARF Accredited (www.CARF.org), which ensures we strive to meet the highest standards of quality, safety and outcomes.

Levine Children's Hospital Pediatric Rehabilitation Pavilion

Our Results

In 2014, we served 160 patients from VA, NC and SC. Though our largest treatment diagnosis group is brain injury, we also serve those with spinal cord injury, amputation, heart transplant, multiple traumatic injuries, oncologic disease, general decline in functional ability and many other diagnoses.

We utilize UDSmr (Uniform Data System for Medical Rehabilitation) and WeeFIM (ages 0-3) to measure and document functional performance in our patients. We are then able to benchmark our data with other facilities across the nation to be sure we are always working to provide the best care. We also collect, analyze and report other data such as referral information, discharge disposition and average treatment hours by diagnosis.

The following graphs and descriptions provide you with more detail about who we serve and how well we do.

2014 Levine Children's Hospital Pediatric Rehabilitation Diagnosis Categories

What does this mean?

The graph above shows that we have children with a wide variety of diagnoses. Our skilled team tailors the treatment plan to provide the best care for you and your child.

2014 Levine Children's Hospital Pediatric Rehabilitation Patient Ages

From the graph above, you can see that we serve a wide range of ages. This gives all patients the opportunity to interact with others around the same age during their stay. Families and caregivers can also get to know each other, often sharing experiences and forming strong supportive relationships.

What does this mean?

The graph above shows the average amount of time our children stay with us. The length of time will vary depending on your child's needs. For 2014, our average length of stay was just over 3 weeks, which was about 1.5 days less than the national average. This means our patients are able to reach their goals and go home sooner than the national average for pediatric rehabilitation facilities.

2014 Levine Children's Hospital Pediatric Rehabilitation Discharged to Home/Community

What does this mean to you?

From the graph above, you can see that almost all of our children are able to return home with their family or caregiver. Those who didn't go home moved to other facilities. Our team uses the many resources available to prepare for and provide support as you transition home.

* Excludes patients who had interrupted rehab stays due to acute care needs.

2014 Levine Children's Hospital Pediatric Rehabilitation WeeFIM Total Gain

What does this mean?

This measurement helps us track the functional progress our patients make towards their goals. Whether our patients are with us for 2 weeks or 4 weeks we are always working to maximize their function and provide the necessary education to allow continued progress after rehab.
